T3 — Image and video candidates

Checkpoint: March 19, 2026

Below are 3 visual choices for each of the 8 T3 articles (24 candidate slots), independent of the original publisher. These are sourced image/video pages, not an exact Google Images ranking. Some images are intentionally contextual or mismatched, which is useful for testing MultiEvidence.

1. Trump and Starmer discuss reopening the Strait of Hormuz — Punch

1. Trump–Starmer photograph

September 2025 • AP Pool

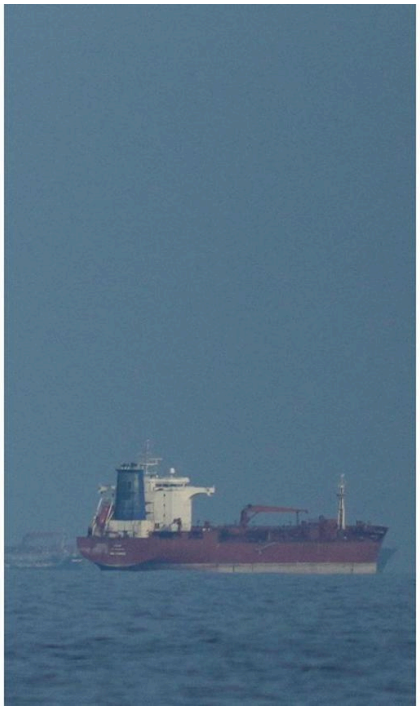

Article + photograph

2. March 15 discussion coverage

March 15 • ITV News

Article + media

3. International response

March 15–16 • Euronews

Article + image

Best mismatch: Choice 1 is a real photograph from September 2025, not the March 15 conversation. It is relevant to the people but does not visually establish the reported discussion.

The Times of Israel
+2

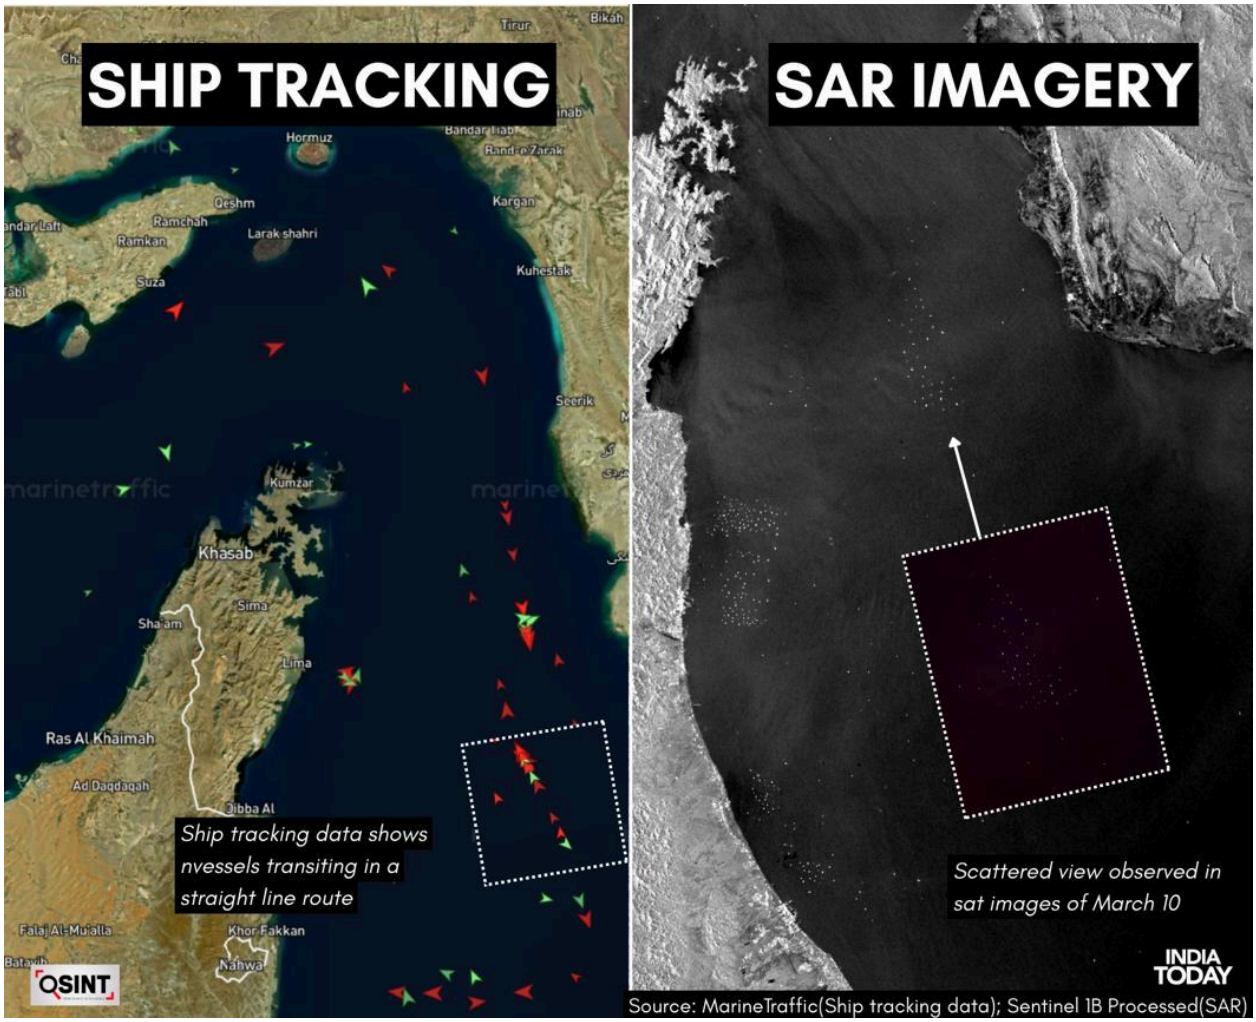

2. Iran continues shipping oil to China despite the blockade — NetEase

1. Ship anchored off Muscat

March 9 • Reuters

[Article + photograph]

2. AIS versus satellite imagery

March 10 • TankerTrackers

[Satellite comparison posts]

3. Iranian oil exports

March 11 • Times of India

Article + image

Best option: Choice 2. Comparing satellite vessel detections against AIS records illustrates why physical observations can add information missing from conventional tracking feeds. Choices 1 and 3 do not establish that a particular Iranian tanker crossed the Strait.

Finance News

3. Hegseth warns about shipping security — Hindustan Times

1. March 13 Pentagon briefing

March 13 • ABC News

Photograph + article

2. Reuters briefing footage

March 13 • Reuters video

[Video source]

3. CBS maritime-security report

March 13 • CBS video

Watch video

The first two choices can verify what Hegseth publicly said, especially with the original audio. A speaker at a podium cannot visually prove that shipping is safe or that escorts are taking place.

ABC News
+2

4. Japan releases emergency oil reserves — Economic Times

1. Kobe oil storage tanks

March 13 • Getty Images

Article + photograph

2. Yokohama refinery tanks

February photo • March 16 article

Article + image

3. Prime minister announces release

March 11 • Kyodo / Reuters

Article + photograph

Best evidence distinction: The tank photographs show oil infrastructure, not oil being released. A video of an actual transfer or official release documentation would be needed to establish implementation.

الجزيرة نت
+2

5. G7 considers warship escorts for tankers — NetEase

1. Macron aboard naval carrier

March 9 • Naval context

Article + imagery

2. G7 coordination announcement

March 11 • Report

Article + photograph

3. Request for international support

March 15 • Associated Press

Article + image

These illustrate the planning and political context, not completed G7 naval escorts.

DIE ZEIT
+1

6. G7 naval-protection proposal — Die Zeit

1. AFP photograph accompanying Die Zeit

March 12 • AFP / Getty

Original article + image

2. French naval preparations

March 9 • USNI News

Article + photograph

3. Coalition difficulties

March 16 • Reuters

Article + media

Choice 1 is the original Die Zeit media candidate. The article explicitly states that conditions for coordinated escorts were not yet in place.

DIE ZEIT
+1

7. Hegseth discusses keeping Hormuz open — Economic Times video

1. AP video of Pentagon briefing

March 13 • AP

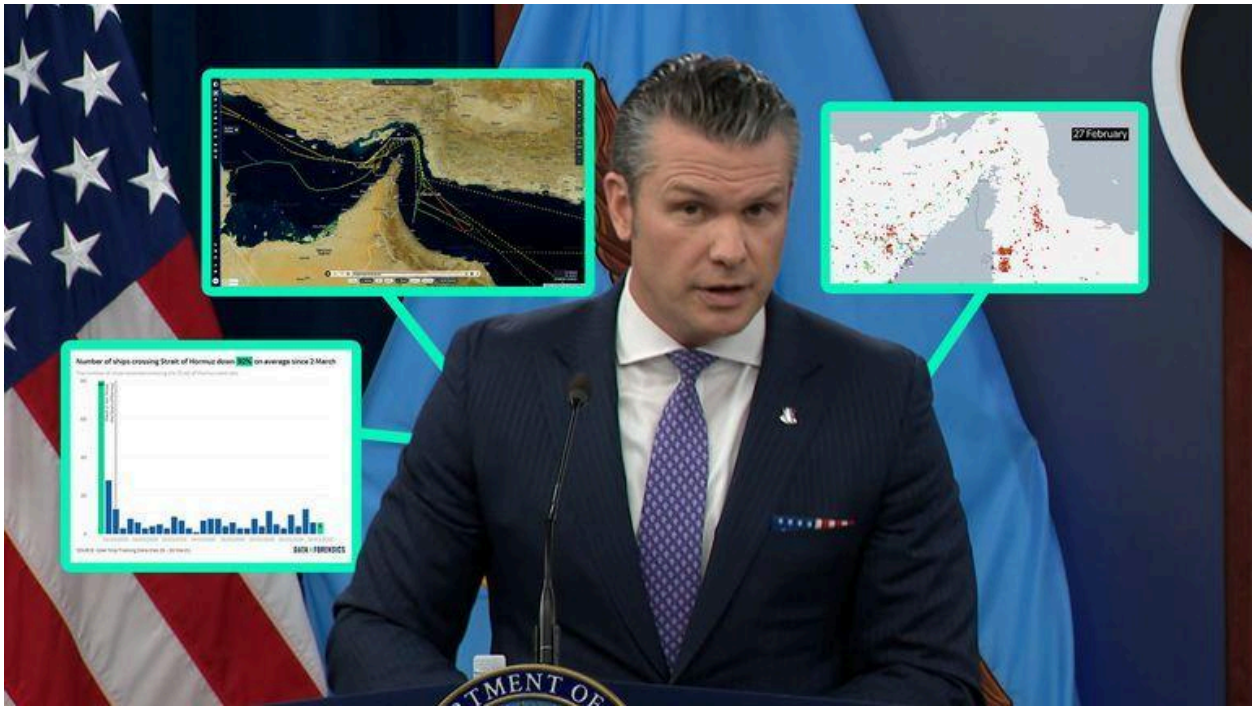

Watch video

2. Sky News video clip

March 13 • 41 seconds

Watch clip

3. Pentagon exchange

March 14 • Financial Express

Watch video

These are good for audio-grounded verification: checking what an official actually said, rather than relying on a paraphrased headline.

yahoo.com
+2

8. Shipping virtually halted amid renewed escalation — Express Germany

1. Damaged vessel, Mayuree Naree

March 11 • Royal Thai Navy / Reuters

Photograph + article

2. Energy infrastructure attacks

March 19 • The Guardian

Images + visual analysis

3. Incident documentation

March 11 • USNI News

[Photographs + incident report]

Choice 1 provides particularly strong visible evidence of damage to an identified vessel. Choice 2 concerns energy infrastructure, a related but different claim, and the Guardian page was later modified—use only material demonstrably available by March 19.

al-monitor.com

My recommended 5 for Hao's T3 demo

Priority	Visual	Best demonstration
1	Mayuree Naree fire photograph	Direct evidence of vessel damage
2	TankerTrackers AIS vs SAR comparison	Physical-world evidence beyond incomplete vessel signals
3	Hegseth March 13 original briefing video	Spoken statement verification
4	Trump–Starmer older photograph	Temporal mismatch / insufficient evidence
5	French naval mission imagery	Distinguish planned operations from completed escorts

I would particularly showcase items 1 and 4. They demonstrate two contrasting outcomes: an image showing actual physical damage, and a contextually relevant image that does not establish the report's claim.

For the final cached package, verify the actual downloaded image and its provenance, and run MultiEvidence against the exact T3 report sentence, not just the associated article headline. No verification results have been generated yet.
